El Tiranosaurio Rex

Tiranosaurio significa "dinosaurio tirano". Se le dio este nombre porque fue el más grande y temible de los cazadores carnívoros. Provisto de dientes que median 15 cm de largo, podía tragarse entero a un dinosaurio herbívoro de temprana edad. Estos dinosaurios tenían cráneos gruesos, cuellos poderosos y dientes fuertes, todos ellos capaces de soportar violentas embestidas.

El Tiranosaurio medía 15 m de longitud, parado alcanzaba una altura de 6 m y pesaba 8 veces más que un elefante corriente. Tenía mejor vista que los demás dinosaurios y miraba de frente con ambos ojos como hace el ser humano, lo cual era una ventaja para cazar.

Se pensaba que el Tiranosaurio era un dinosaurio de movimientos lentos debido a la estructura de sus caderas y patas, concluyéndose, como resultado de esta teoría, que para sobrevivir se veía obligado a comer dinosaurios muertos, pero esta teoría ha sido modificada. Muchos científicos piensan que el temido cazador fue capaz de movilizarse a la velocidad de 65 km/h, siendo por lo tanto más rápido que otros dinosaurios de su época.

Tiranosaurio

Tiranosaurio significa "dinosaurio tirano" e gli è stato dato questo nome perché era il più grosso e il più spaventoso dei dinosauri carnivori. Con denti lunghi 15 cm, poteva inghiottire un giovane dinosaurio erbivoro tutt'intero. Il teschio spesso, il collo poderoso e i denti forti potevano resistere a cariche possenti. Il tiranosaurio era lungo 15 metri e quando si rizzava in piedi arrivava fino a 6 metri. Pesava otto volte più di un elefante medio. Inoltre aveva una vista migliore di quella della maggioranza dei dinosauri e poteva guardare direttamente in avanti con entrambi gli occhi, proprio come te. Questo era un grosso vantaggio nella caccia.

In passato si credeva che a causa della struttura dei fianchi e delle zampe, il tiranosaurio fosse un animale dai movimenti lenti, che lo costringevano a mangiare dinosauri morti per sopravvivere. Ora questa teoria è sorpassata: oggi la maggior parte degli scienziati crede che questo spaventoso cacciatore potesse correre alla velocità di 65 Km orari, cioè più velocemente di altri dinosauri del suo tempo.

Tyrannosaurus Rex

Tyrannosaurus means "tyrant dinosaur". Tyrannosaurus was given this name because it was the biggest and scariest of the meat-eating hunters. With teeth that were 15 cm (6in.) long, it could swallow a young meat-eating dinosaur whole. These dinosaurs had thick skulls, powerful necks and strong teeth, all of which could absorb forceful charges.

The Tyrannosaurus measured 15m (49ft.) long, stood up to 6 m (20 ft.) high, and weighed eight times heavier than the average elephant. It could also see better than most dinosaurs. They could look straight ahead with both eyes just as you do. This provided them with an advantage for hunting.

It was once believed that because of the structure of its hips and legs, the Tyrannosaurus was a slow moving dinosaur. The result of such a theory, concluded that the Tyrannosaurus was forced to eat dead dinosaurs to survive. This theory has since been revised. Most scientists believe that the fearsome hunter was able to move at quite a speed 65 km/h (40mi/h), which is faster than other dinosaurs of its time.

Tyrannosaurus Rex

Tyrannosaurus signifie «dinosaurie tyran». On lui a donné ce nom parce qu'il était le plus grand et le plus effrayant de tous les chasseurs carnivores. Avec ses dents de 15 cm de long, il pouvait avaler tout rond un jeune dinosaurie herbivore. Le Tyrannosaurus avait un gros crâne, un cou puissant et de dents solides, qui pouvaient tous résister à de violentes attaques.

Le Tyrannosaurus mesurait 15 mètres de long, pouvait atteindre 6 mètres de haut et pesait huit fois plus qu'un éléphant de taille moyenne. Il pouvait aussi voir mieux que la plupart des dinosauriens et regarder droit devant lui avec les deux yeux, tout comme un être humain. Cela était un grand avantage pour la chasse.

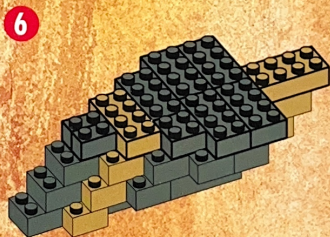

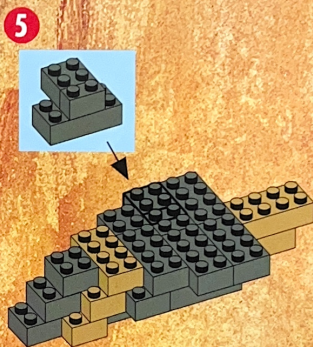

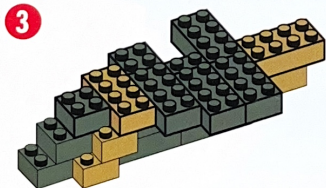

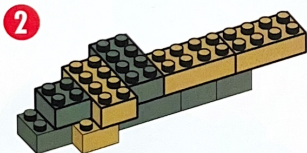

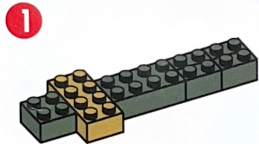

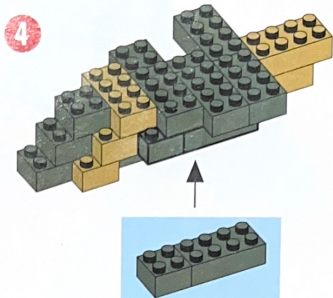

À une certaine époque, on croyait que le Tyrannosaurus se déplaçait lentement, à cause de la structure de ses hanches et de ses pattes. Cette théorie, que l'on a revue depuis, avait permis de conclure que le Tyrannosaurus devait manger des dinosauriens morts pour survivre. Aujourd'hui, la plupart des savants croient que le redoutable chasseur était capable de se déplacer à grande vitesse : 65 km/h, ce qui est plus rapide que les autres dinosauriens de cette époque.

Tyrannosaurus Rex

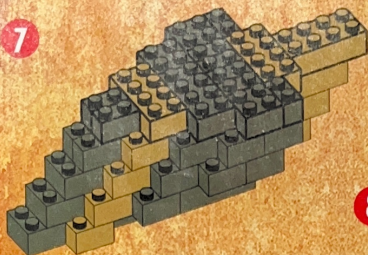

Tyrannosaurus bedeutet "Dinosauriertyrann". Der Tyrannosaurus wurde mit diesem Namen belegt, weil er der größte und fürchterste der fleischfressenden Jäger war. Mit seinen 15 cm langen Zähnen konnte er einen jungen pflanzenfressenden Dinosaurier ganz herunterwürgen. Diese Dinosaurier hatten einen dicken Schädel, einen massigen Nacken und starke Zähne, die allesamt heftige Angriffe auffangen konnten.

Der Tyrannosaurus erreichte eine Länge von 15 m, eine Höhe von 6 m und wog achtmal soviel wie ein durchschnittlicher Elefant. Er hatte eine bessere Sehfähigkeit als die meisten Dinosaurier. Er konnte genau wie Du direkt nach vorne schauen. Das war ein Vorteil für die Jagd.

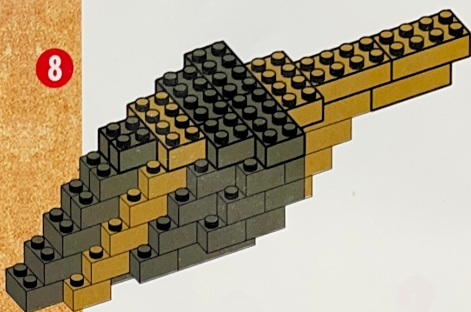

Ursprünglich wurde vermutet, daß der Tyrannosaurus wegen der Beschaffenheit seiner Hüften und Beine zu den langsamen Dinosauriern gehörte. Als Ergebnis einer solchen Theorie wurde angenommen, daß der Tyrannosaurus gezwungen war, bereits tote Dinosaurier zu fressen, um zu überleben. Diese Theorie gilt inzwischen als überholt. Die meisten Wissenschaftler sind der Überzeugung, daß sich fürchterliche Jäger mit der beachtlichen Geschwindigkeit von 65 km/h fortbewegen konnte. Das ist schneller als die meisten Dinosaurier seiner Zeit.
